STANDARD OPERATING PROCEDURE OF Whole Shoe Wash VF-G03

Lab /SOP/ 49

Automatic Washer and Dryer

AATCC Chromatic transference scale

Detergent as specified in BS EN 26330

Graduated glass cylinder

Multi fiber fabric

Detergent as specified in BS EN 26330

Place the shoe (s) inside washing machine.

Only one type of shoe may be washed at a time, different types and colors of shoes should be washed separately.

The washer shall be operated as follows:

Water level setting-HIGH

Machine control setting- Footwear (optional – depends on the machine type)

Water temperature setting @ RT or maximum at 30oC (optional – depends on the machine type)

Set water temperature @ 30oC or at RT if the washing machine doesn't have provision on temperature control.

Add detergent, at approx. 4 grams for every ½ pair of shoes.

The washing cycle: Wash, drain, wash, drain, dry.

Dry at temperature between 50 - 60oC for 30 minutes. If the machine doesn't have provision for drying, let it dry at room temperature.

When fully dried, examined for visual changes in conditions
